

Module 10: Business Logic Assignment - 1

Problem Statement:

The management requires you to add more functionalities to the wallet object we created in the last assignment (refer assignment 9 for objects).

Now the management wants you to add more logic to the module:

- Introduce a field wallet balance which is a formula field updated as wallet balance – bill amount.
- The field in wallet: wallet balance should have a validation process where wallet balance should never be negative.
- Create a process that sends a mail if the wallet balance is less than 100.
- A roll up summary having sum of the entire bill generated to the user so far.
